

Introduction

Welcome to CasBadge, a badge maker for Moodle. CasBadge is part of the CCTK (Caspar's Cool Tool Kit), a collection of apps for creating Moodle badges.

Access the toolkit here: <https://caswynne.github.io/psychactivities2/>

Bug marker: The symbol  in this guide flags a known bug. See [Known Bugs](#) at the end for details. If you spot a bug that isn't listed, please email c.wynne@leedstrinity.ac.uk.

Example badges

Available versions

There are currently two versions of the app:

- **CasBadge** — the standard badge maker. This guide covers this version.
- **CasBadge3D** — a beta version that adds STL file generation for 3D printing. Still in development.

Getting Started

You can reach CasBadge two ways:

1. **Via the CCTK:** <https://caswynne.github.io/psychactivities2/>
2. **Direct link:** <https://caswynne.github.io/psychactivities2/badge-maker/index.html>

The Interface

The interface is made up of the following tools and options:

Tool	What it does
------	--------------

1	App Name / Version	Shows the current app name and version (CasBadge or the in-development CasBadge3D).
2	Position Grid Toggle	Turns on a grid overlay to help you position icons and text (see below).
3	Moodle Preview Window	A live preview of how your badge may appear in Moodle. This is a guide only — a user's device settings may change how the badge actually displays.
4	Undo Action	The classic undo button. Removes your last action.
5	Auto-fit	Ensures all elements sit safely within the badge boundaries.
6	Import Badge	Imports SVG files that were exported from CasBadge. SVGs from other sources will not load.
7	Export Badge	Exports your badge as PNG, JPG, or SVG (see Exporting below).
8	Settings Panel	Where you build and fine-tune your badge (see The Settings Panel below).

Position grid

Turn the grid overlay on to help align icons and text:

Exporting

The Export button lets you save your badge in three formats:

- **PNG** and **JPG** — image formats with different levels of compression. These cannot be re-imported into CasBadge.
- **SVG** — a vector file. This is the only format CasBadge can re-import for further editing.

If you export as PNG or JPG, you won't be able to import it back into the app. Export as SVG if you want to keep editing later.

The Settings Panel

The settings panel is where you create your badge and adjust its features. It's divided into several sub-panels.

Badge Shape

There are four badge shapes, each intended for a different badge level:

Shape	Intended for
Square	Level 4 badges
Pentagon	Level 5 badges
Hexagon	Level 6 badges
Circle	All other badges

Advanced badge shape settings let you customise the shape further:

- **Scalloped Edge (Rosette) toggle** — turns the scalloped edge effect on or off.
- **Scallop Count** — sets the number of scallops around the badge.
- **Scallop Depth** — sets how deep the scallops are. Higher depth = pointier scallops.
- **Border Width** — changes the depth of the border. A larger value means less white space in the centre of the badge.

Colour Style

There are 11 preset colours, each with a metallic gradient effect. Changing the colour affects both the badge border and the decorations.

Advanced colour settings let you:

- Change the individual colours in the gradient.
- Add or remove colours (minimum of 2).

Badge Text

Badge text consists of a **Title** and an optional **Subtitle**.

- The **Title** is required and is used as the badge's file name when exported.
- The **Subtitle** is optional — leave it blank if you don't need one.
- Both fields have character limits, and text resizes automatically as you type.

Field	Character limit
Title	16 characters
Subtitle	40 characters

Tip: Keep badge text as short as possible for the best visibility.

Advanced text settings let you adjust the following for both the title and subtitle:

- **Size**
- **Colour**
- **X position** — horizontal (left/right) position from the centre point.
- **Y position** — vertical (up/down) position from the centre point.
- **Curve** — display text on a straight line or curved along the top or bottom of the badge. 
- **Curve Radius** — flattens or increases the curve of the text. 
- **Align:**
 - **L / C / R** — Left / Centre / Right aligned
 - **T / M / B** — Top / Middle / Bottom aligned

Icons

Icons are small SVG images that add visual flair or hint at a badge's meaning — for example, a flask or questionnaire icon on a research badge.

Why use icons instead of images? Icons are SVGs, which means they scale infinitely without losing detail. Images can look pixelated when enlarged.

You can add icons in three ways:

- **Pre-set examples** — a small selection based on common badge themes. Click the drop-down and choose one to add it. You can also search the **Iconify**

database (over 300,000 icons) by keyword to find something close to what you want.

- **Import your own icon (Tabler)** — search Tabler icons and paste an icon's SVG link into the text box.
- **Upload your own image (PNG or JPG)** — import your own images, but note that scaling will affect their clarity.

Editing icons: Each icon you add gets its own settings box at the bottom of the Icons panel, where you can adjust:

- **X position** — horizontal position
- **Y position** — vertical position
- **Scale** — icon size (larger number = larger icon)
- **Colour** — leave it the default grey to match the badge colour setting or click the colour box to choose your own.
- **↺ Style** — resets the icon to its default settings. 
- **Align** — L / C / R and T / M / B, as with text.

Decorations

Decorations are small, non-topic details that add extra flair. By default, every badge starts with two laurels (left and right) and a central sparkle.

There are 8 other options: left laurel, right laurel , sparkle, divider, ribbon, crown, dot divider, and starburst.

Decorations work just like icons — each one gets its own settings box, and you can edit the same parameters (X, Y, Scale, Colour, Align) in the same way.

Can't find the decoration you want? Use an icon instead — they're fundamentally the same thing.

Level Marker

You can add a **Level Pill** to the badge. There are four options:

- No Level Marker
- Level 4
- Level 5
- Level 6

Known Bugs

The following bugs are known and being worked on:

1. **Curved text X and Y adjustments not working** (both title and subtitle).
2. **Curve radius repositions text.** Increasing or decreasing the curve radius moves the text up (higher radius) or down (lower radius) on the Y axis. It should stay in the same position and only change the curvature.
3. **Ū Style not working.** The reset-to-default button appears not to function and may be removed.
4. **Right laurel renders incorrectly** in the decorations grid.

Found a bug that isn't listed here? Please email c.wynne@leedstrinity.ac.uk.
