Polar H10 Heart Rate Sensor

Introduction

This user manual helps you get started with your new Polar H10 heart rate sensor. You can find the latest version of the manual and video tutorials at support.polar.com.

Polar H10 is a supremely precise heart rate sensor that comes with the comfortable and machine-washable Polar Pro chest strap. Providing top-quality and interference-free electrical measurement, Polar H10 is considered the most accurate heart rate sensor by many sources.

Polar H10 connects and transfers data via Bluetooth®, ANT+™ and Polar GymLink (5 kHz) and so brings an excellent variety of connection options with compatible sports watches, smart watches and training apps. You can also have two simultaneous Bluetooth connections. Additionally, the Polar H10 enables training in a group without interference from other heart rate sensors.

Heart rate sensor parts

1. The plastic **electrode areas** on the reverse side of the strap detect heart rate.
2. The **connector** sends the heart rate signal to the receiving device.

Getting started

Compatibility and connectivity

By default, H10 sends heart rate signal via Bluetooth®, ANT+™ and Polar GymLink (5 kHz). It is compatible with Bluetooth® and ANT+™ devices that support heart rate service as well as with older Polar watches and gym equipment having 5 kHz technology.

A separate application is required to view heart rate data on the receiving mobile device. It is recommended to use the Polar Flow app but it is also possible to use other applications.

Note that the H10 transmits your heart rate signal simultaneously via Bluetooth and ANT+. Both connections are set on by default. To save the battery lifetime, you can turn off the connections you don't need from the sensor settings in the Polar Flow app after you have paired the sensor with the app.

Bluetooth transmission range

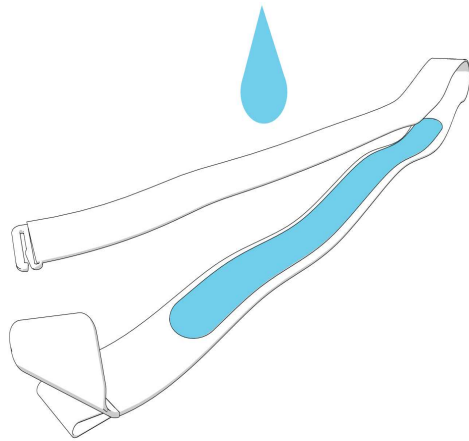

To ensure sufficient transmission range from your H10 to the receiving device, keep the device in front of you. A good place is in a front pocket or fixed on a belt. Do not wear the receiving device on your back (for example, in a back pocket or backpack). More information about the Bluetooth transmission range can be found at support.polar.com.

First-time use

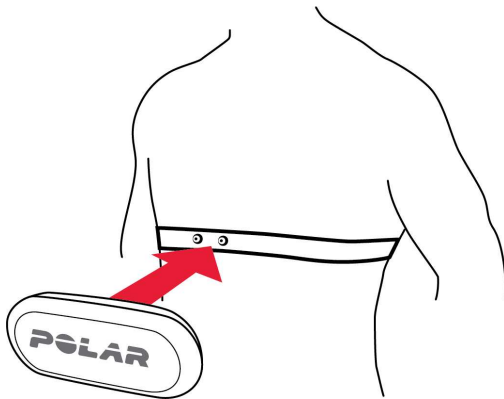

To get started with your Polar H10, pair it with the Polar Flow app first. You will get the latest firmware updates for your sensor through the app. If you use the sensor with a Polar watch or other device or application, pair it with them as well. Refer to the chapter [Pairing](#) for instructions on how to pair your H10 with the Flow app and Polar watches. If you use the H10 with a device or application from another manufacturer, see the manufacturer's instructions for more information on pairing.

Wearing the heart rate sensor

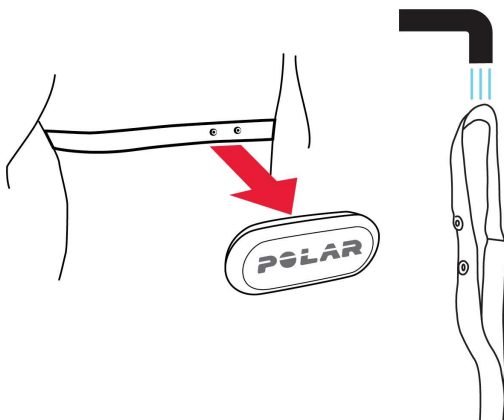

1. Moisten the electrode area of the strap.

2. Fasten the strap around your chest and adjust the strap to fit snugly.
3. Attach the connector.

4. After training, detach the connector to save the battery lifetime, and rinse the strap under running water. Wash the strap often at 40°C / 104°F to keep it clean.

Detach the connector from the strap and rinse the strap under running water after every use. Sweat and moisture may keep the electrodes wet and the heart rate sensor activated. This will reduce the sensor battery life. Wash the strap often at 40°C / 104°F to keep it clean. To ensure proper care, please refer to the comprehensive instructions in [Caring for your heart rate sensor](#).

Pairing

Start using your H10 by pairing it with the Polar Flow app. This will ensure you receive the latest firmware updates.

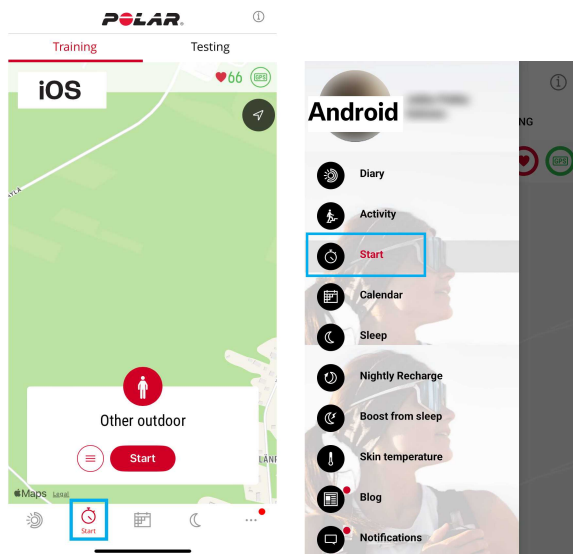

Please note that the pairing should be done through the Flow app, not in your phone's Bluetooth settings.

If you use the H10 with a Polar watch or another device, pair it with them as well.

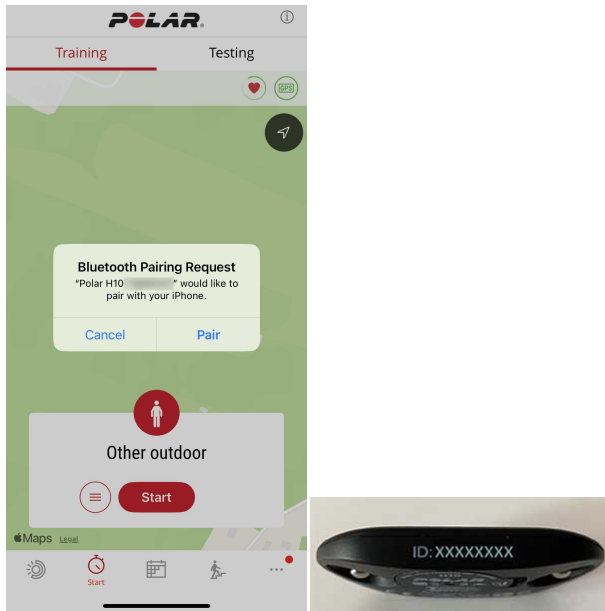

Pair with Polar Flow app

1. Download Polar Flow app from App Store or Google Play.
2. Sign into your Polar account or create a new one.
3. [Wear](#) the sensor.
4. Go to **Start** in the main menu.

5. A Bluetooth pairing request will appear on the Flow app display. Ensure the sensor ID number in the pairing request matches the one printed on the side of your sensor. Accept the Bluetooth pairing request by tapping **Pair**

in the app. Once pairing is complete, your heart rate will be displayed at the top of the **Training** view in the app.

Pair with a Polar watch

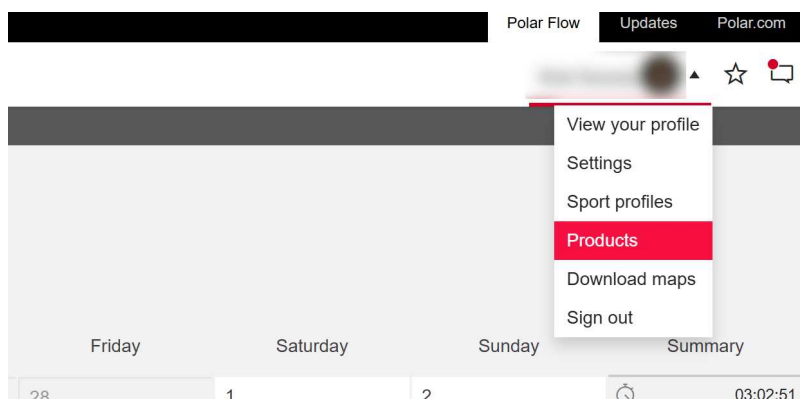

Check the user manual of your Polar watch at support.polar.com for specific pairing instructions.

Delete pairing

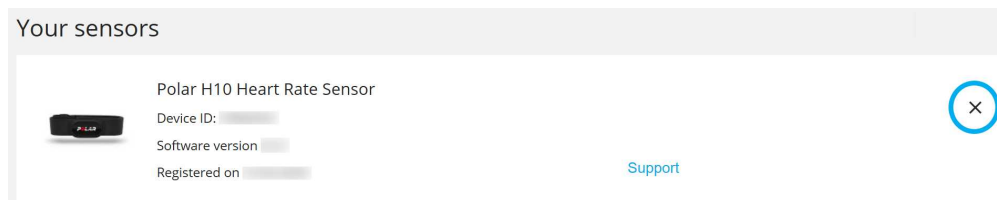

Delete pairing with the Flow app

To delete pairing with the Flow app, you need to 1) remove the sensor from the **Products** list in the Polar Flow web service and 2) remove the sensor from the list of paired Bluetooth devices on your mobile device.

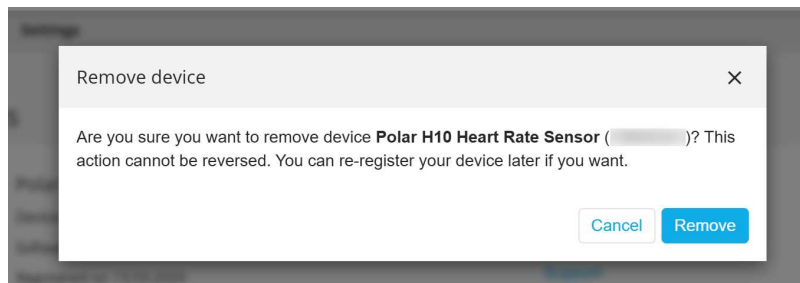

1. Go to flow.polar.com and sign in.
2. Click your name in the upper right corner and choose **Products**.

3. Find the product from the list and click the delete icon (X).

4. Confirm by clicking **Remove**.

5. On your mobile device remove your H10 from the list of paired Bluetooth devices:
 - iOS: Settings > Bluetooth > tap “i” next to Polar H10 > Forget This Device.
 - Android: Settings > Bluetooth > tap the cogwheel icon next to your Polar H10, and FORGET.

Delete pairing with a Polar watch

For instructions, see the user manual of your Polar watch at support.polar.com.

Training with Polar H10

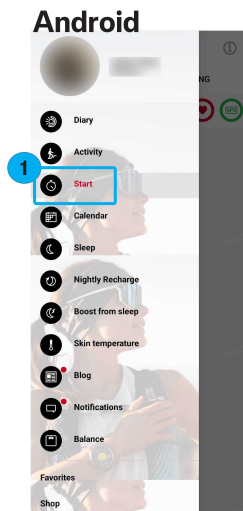

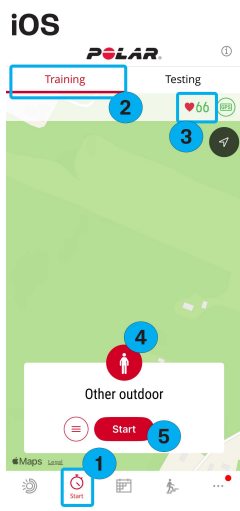

After training, detach the connector to save the battery lifetime, and rinse the strap under running water. Wash the strap often at 40°C / 104°F to keep it clean. To ensure proper care, please refer to the comprehensive instructions in [Caring for your heart rate sensor](#).

Training with Polar Flow app

You can record your training sessions with heart rate data in the Polar Flow app wearing a paired heart rate sensor. See chapter [Pairing](#) for instructions how to pair the sensor with the app.

1. [Wear](#) your sensor.
2. Open the Flow app, go to **Start** in the main menu (1) and select **Training** at the top of the page (2). The Flow app starts detecting your heart rate and shows it at the top of the page (3).
3. Select a sport profile by tapping the sport icon (4).
4. Tap **Start** to start the training session (5).
5. To end the training session, tap **Pause** and tap and hold **Stop** and save the training session.

For more detailed instructions on training with the Flow app, see [Recording training sessions with Polar Flow app](#) at Polar support website.

Training with a Polar watch

To use your heart rate sensor with a Polar watch, you must pair the devices first. For detailed instructions on pairing and training, see the user manual of your Polar watch at support.polar.com.

Using your heart rate sensor in water

Polar H10 is water resistant. The Polar GymLink technology can be used in water activities, but Bluetooth® or ANT+ wireless technology will not work in water. Please notice that sea and pool water are very conductive, and electrodes may short-circuit, preventing electrically measured signals from being detected by the heart rate sensor.

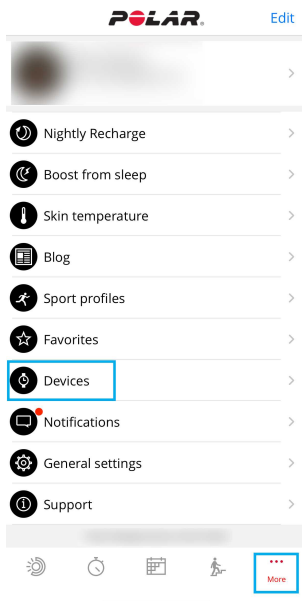

When using a bathing suit, the best performance is achieved by wearing the heart rate sensor underneath it.

See chapter [Sensor settings](#) for instructions on how to turn the GymLink transmission on from the Flow app.

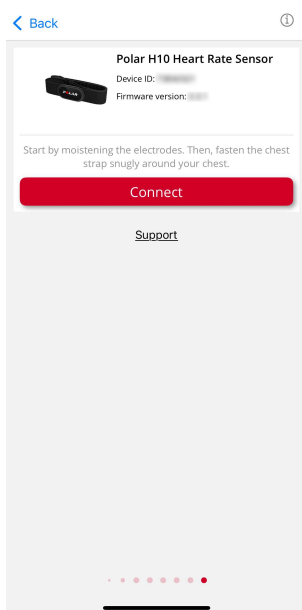

Sensor settings

You can adjust the settings of your H10 heart rate sensor through the Polar Flow app after you have [paired](#) the sensor with the app.

1. Wear the heart rate sensor.
2. Open the Flow app and go to **Devices** on the main menu.

3. If you have multiple devices, swipe left or right to browse the devices list and find Polar H10.
4. Tap **Connect** to see the settings.

Heart rate visible to all: On by default. When on, you are broadcasting your live heart rate publicly meaning that any compatible app or device nearby can pick up your heart rate. Turn off to optimize sensor battery life and make your sensor invisible to other compatible apps or devices.

ANT+: On by default. When **ANT+** is on, your sensor is visible to compatible gym equipment or training devices using ANT+ and they can pick up your heart rate.

2 Bluetooth devices: On by default. When the setting is on, any two compatible apps or devices nearby can pick up your heart rate simultaneously. For example, you can share your heart rate with your Polar watch and gym equipment at the same time.

GymLink: On by default. When turned on, you can use your sensor with compatible (5 kHz) gym equipment or training devices, for example, with older Polar watches.

Factory reset: [Resets your heart rate sensor](#) to its factory settings, and clears the sensor memory.

Firmware update

With the Polar H10 heart rate sensor, we'll be able to bring updates to your sensor to improve it or even bring new functionalities to it. You'll be able to [update the firmware](#) via the Polar Flow app. To receive the firmware updates, your H10 needs to be [paired](#) with the app. The app will let you know if there's an update available and will guide you through it.

Sensor pairing with a Polar or third-party device or app is required after a reset, update, or battery replacement if you are using a firmware version earlier than 3.3.1 for H10.

Resetting the sensor

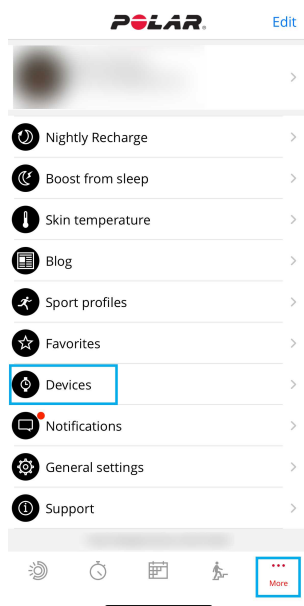

Resetting the heart rate sensor clears the sensor memory and resets the sensor to factory settings. Resetting can be used as a [troubleshooting](#) method, if the sensor is not working as it should. Reset the sensor also if you are planning to sell it.

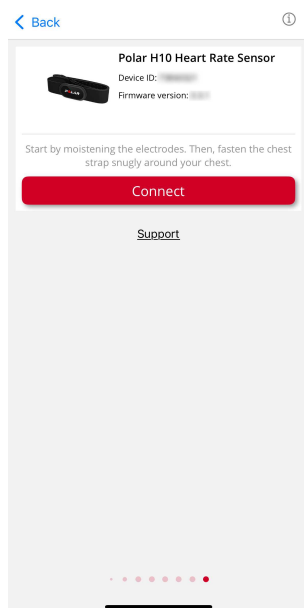

Sensor pairing with a Polar or third-party device or app is required after a reset, update, or battery replacement if you are using a firmware version earlier than 3.3.1 for H10.

Resetting via Flow app

1. Wear the heart rate sensor.
2. Open the Flow app and go to **Devices** on the main menu.

3. If you have multiple devices, swipe left or right to browse the devices list and find Polar H10.
4. Tap **Connect**.

5. Tap **Factory reset** to reset your device to its factory settings, and remove any personal data.

Resetting by removing the battery

1. Remove the battery.
2. Press the metal snaps that attach to the strap with your fingers for at least 10 seconds.

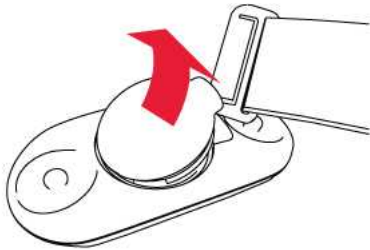

3. Wait 30 seconds and then put the battery back in.

Batteries

The battery level of your heart rate sensor is displayed on the receiving device.

The heart rate sensor has a user changeable battery. To change the battery yourself, follow the instructions below.

1. Lever the battery cover open by using the clip on the strap.

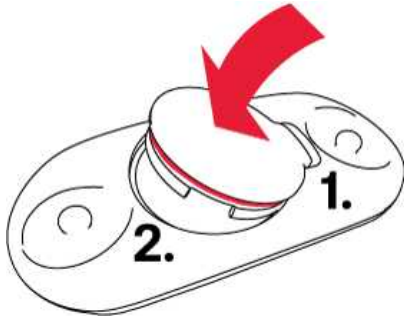

2. Remove the old battery from the battery cover.
3. Insert the new battery **CR2025** inside the cover **with the positive (+) side downwards**. We recommend using batteries from reputable brands, such as Panasonic and Maxell, as their operational quality has proven to be reliable with Polar heart rate sensors.

4. Make sure the red sealing ring is in place, clean and intact. If the sealing ring is damaged, replace it with a new one*.
5. Put the battery cover back in place. First, align the ledge on the battery cover with the slot on the connector. Hold the ledge in place with your finger, then press the other side of the battery cover back into place. You should hear a snap. Ensure that the battery cover is properly closed to keep the sealing ring in place and to maintain the

sensor's waterproofness.

* Replacement sealing rings can be purchased at Polar Service Centers.

Sensor pairing with a Polar or third-party device or app is required after a battery replacement if you are using a firmware version earlier than 3.3.1 for H10. [See instructions.](#)

Keep batteries away from children. If swallowed, contact a doctor immediately. Batteries should be disposed of in compliance with local regulations.

Caring for your heart rate sensor

Follow the care instructions to ensure reliable heart rate measurements and prolong the lifespan of the textile strap, which wears out over time like any other piece of clothing. Maintaining the cleanliness of both the sensor and the strap keeps the device in optimal operational condition and comfortable to wear. Also, remember to store the heart rate sensor properly. The following instructions will help you fulfill guarantee obligations.

Connector

After every use

To prevent snap oxidation and battery drain:

- **detach the connector from both strap snaps**
- rinse the connector under running water and dry with a soft towel.

When needed

- Clean the connector with a mild soap and water solution. Never use alcohol, disinfectant or any abrasive material (steel, wool or cleaning chemicals).

- Never put the connector in a washing machine or dryer.

Strap

After every use

- **Rinse the strap under running water.**
- Hang to dry, but avoid direct sunlight.

After every five workouts or at least once a week

- **Wash the strap in a washing machine in 40°C / 104 °F.** Lower temperatures do not remove impurities from the electrode material, and higher temperature can damage the strap. Do not use bleach or fabric softener.
- Do not soak, iron, dry clean or bleach the strap. Check the label on your strap for detailed washing instructions.
- Using a washing bag is recommended.
- Do not put the strap in a dryer or use the drying program of a washing machine.
- Remember to detach the connector from the strap before washing.
- We highly recommend machine washing. However, you can also hand wash the strap using lukewarm water (40°C / 104°F) with a mild dish soap. Rinse the strap thoroughly after washing and hang it to dry, but avoid direct sunlight. Do not use moisturizing soaps or any soaps that include skin softeners, because they can leave residue on the strap. Never use alcohol, disinfectant or any abrasive material (steel, wool or cleaning chemicals).

Other things to take into account

- Do not stretch the strap or bend the electrode areas sharply, as it could damage the strap.
- Wash the strap and the sensor after every use in sea water or in a pool with high chlorine content.

Dirt impairs the elasticity and functioning of the strap. Wash the strap often to maintain its functionality and maximize its lifespan. If desired, the strap can be washed daily.

Remember, the strap doesn't last forever; it wears out like any other garment you regularly wear and wash. Even when the strap appears to be in good condition, the electrodes inside of it could be worn out, causing unreliable readings. Replacement straps are available as accessories when yours become worn out.

Storing

- **Dry and store the heart rate sensor strap and the connector separately** to maximize the heart rate sensor battery life.
- Wash the strap and the connector before long-term storage.
- Keep the heart rate sensor in a cool and dry place.
- Do not store the heart rate sensor while it's wet in non-breathing material, such as a sports bag, to prevent snap oxidation.
- Do not expose the heart rate sensor to direct sunlight for extended periods.

Precautions

The Polar H10 is designed to measure heart rate. No other use is intended or implied. This device is not for medical purposes and should not be used for obtaining environmental measurements that require professional or industrial precision.

Interference during training

Electromagnetic Interference and Training Equipment

Disturbance may occur near electrical devices. Also WLAN base stations may cause interference when training with the training device. To avoid erratic reading or misbehavior, move away from possible sources of disturbance.

Training equipment with electronic or electrical components such as LED displays, motors and electrical brakes may cause interfering stray signals.

If the training device does not work with the training equipment, it may be electrically too noisy for wireless heart rate measurement.

Health and training

Training may include some risk. Before beginning a regular training program, it is recommended that you answer the following questions concerning your health status. If you answer yes to any of these questions, we recommend that you consult a doctor before starting any training program.

- Have you been physically inactive for the past 5 years?
- Do you have high blood pressure or high blood cholesterol?
- Are you taking any blood pressure or heart medication?
- Do you have a history of breathing problems?
- Do you have symptoms of any disease?
- Are you recovering from a serious illness or medical treatment?
- Do you use a pacemaker or other implanted electronic device?
- Do you smoke?
- Are you pregnant?

Note that in addition to training intensity, medications for heart conditions, blood pressure, psychological conditions, asthma, breathing, etc., as well as some energy drinks, alcohol, and nicotine may also affect heart rate.

It is important to be sensitive to your body's responses during training. **If you feel unexpected pain or excessive fatigue when training, it is recommended that you stop the training or continue at a lighter intensity.**

Note! If you are using a pacemaker or other implanted electronic device, you can use Polar products. In theory interference to pacemaker caused by Polar products should not be possible. In practice no reports exist to suggest anyone ever having experienced interference. We cannot however issue an official guarantee on our products' suitability with all pacemakers or other implanted devices due to the variety of devices available. If you have any doubts, or if you experience any unusual sensations while using Polar products, please consult your physician or contact the implanted electronic device manufacturer to determine safety in your case.

If you are allergic to any substance that comes into contact with your skin or if you suspect an allergic reaction due to using the product, check the listed materials in [Technical Specifications](#). If you experience any skin reaction, stop using the product and consult your physician. Also inform Polar Customer Care about your skin reaction.

The combined impact of moisture and intense abrasion may cause color to come off the heart rate sensor's or wristband's surface, possibly staining light-colored clothes. It may also cause a darker color to come off clothing, possibly staining lighter-colored training devices. To keep a light-colored training device glowing for years to come, please make sure the clothing you wear while training does not bleed color. If you apply perfume, lotion, suntan/sunscreen, insect repellent, or disinfectant on your skin, make sure it does not come into contact with the training device or the heart rate sensor. If you train in cold conditions (-20 °C to -10 °C / -4 °F to 14 °F) we recommend that you wear the training device under the sleeve of your jacket, directly on your skin.

Warning

This product is not a toy. Do not allow children or pets to play with this product. This product contains small components that can be a choking hazard.

How to use your Polar product securely

Polar offers a minimum of five years of product support service to its customers from the sales start of the product. Product support service includes necessary firmware updates to Polar devices and fixes for critical vulnerability as required. Polar constantly monitors the releases of known vulnerabilities. Please update your Polar product regularly, and as soon as the Polar Flow mobile application informs you about the availability of a new firmware version.

Please be aware that when ANT+ and/or Bluetooth broadcasting (i.e. Heart rate visible to all setting) are enabled and your heart rate sensor transmits the ANT+ or Bluetooth signal, any compatible device using ANT+ or Bluetooth Smart wireless technology can receive the signal. This means that these connections are not secure from a user privacy perspective.

Also note that the Polar H10 supports two simultaneous Bluetooth connections and the feature is enabled by default. While this enhances connectivity, it also introduces a potential privacy risk as unauthorized devices may connect to the sensor without the user's awareness, especially in public or shared environments.

Before handing the device over to a third party for testing or before selling it, it is necessary to perform a [factory reset](#) on the device, and to remove the device from your Polar Flow account. A factory reset will clear the sensor memory and resets the sensor to factory setting, and the device cannot be linked to your data anymore. To remove the device from your Polar Flow account, sign into the Polar Flow web service, click your name on top right, choose Products and click the remove icon (X) next to the device you wish to remove.

Training sessions are also stored on your mobile device with the Polar Flow application. For extra security, various security enhancing options can be enabled on your mobile device such as strong authentication and device encryption. Consult the user manual of your mobile device for instructions on enabling these options.

When using the Polar Flow web service, we recommend using a password that is no less than 12 characters in length. If using the Polar Flow web service on a public computer, please remember to clear the cache and browsing history in order to prevent others from accessing your account. In addition, do not allow a computer's browser to store or remember your password for the Polar Flow web service if it is not your private computer.

Any security issues can be reported to [security\(a\)polar.com](mailto:security(a)polar.com). You can also [contact Polar Customer Care](#).

User privacy

Polar H10 has an internal memory that can store heart rate data from one [training session started with the Polar Beat app](#). After completing the training session started with the Beat app, syncing the data to the app will clear the sensor's memory. Please be aware that heart rate data is sensitive information. Therefore, it is important to handle the H10 heart rate sensor with care when not in use, especially if you have not cleared the sensor memory after training with the Beat app. To ensure your data remains secure, we recommend syncing the data to the Beat app immediately after your training session.

Please see also Polar [Privacy Notice](#) and [Privacy FAQ](#).

Technical specifications

Battery type:	CR 2025
Battery sealing ring	O-ring 20.0 x 0.90 Material Silicone
Battery lifetime:	400 h
Operating temperature:	-10 °C to +50 °C / 14 °F to 122 °F
Connector material:	ABS, ABS + GF, PC, Stainless steel
Strap material:	38% Polyamide, 29% Polyurethane, 20% Elastane, 13% Polyester, Silicone prints
Supported services:	Bluetooth® Heart Rate Service ANT+™ Heart Rate Monitor Profile GymLink, 5 kHz (send heart rate only)
Sensors:	Accelerometer

The Polar H10 heart rate sensor applies the following patented technologies, among others:

- OwnCode® coded transmission

Uses wireless Bluetooth® and ANT+™ technology.

Limited International Polar Guarantee

- Polar Electro Oy issues a limited international guarantee for Polar products. For products which have been sold in the USA or Canada, guarantee is issued by Polar Electro, Inc.
- Polar Electro Oy/Polar Electro Inc. guarantees the original consumer/purchaser of the Polar product that the product will be free from defects in material or workmanship for two (2) years from the date of purchase, with the exception of wristbands made of silicone or plastic, which are subject to a guarantee period of one (1) year from the date of purchase.
- The guarantee does not cover normal wear and tear of the battery, or other normal wear and tear, damage due to misuse, abuse, accidents or non-compliance with the precautions; improper maintenance, commercial use, cracked, broken or scratched cases/displays, textile armband or textile or leather wristband, elastic strap (e.g. heart rate sensor chest strap) and Polar apparel.
- The guarantee does also not cover any damage/s, losses, costs or expenses, direct, indirect or incidental, consequential or special, arising out of, or related to the product.
- Guarantee does not cover products which have been purchased second hand.
- During the guarantee period, the product will be either repaired or replaced at any authorized Polar Central Service regardless of the country of purchase.
- Guarantee issued by Polar Electro Oy/Inc. does not affect the consumer's statutory rights under applicable national or state laws in force, or the consumer's rights against the dealer arising from their sales/purchase contract.
- You should keep the receipt as a proof of purchase!
- Guarantee with respect to any product will be limited to countries where the product has been initially marketed by Polar Electro Oy/Inc.

Manufactured by Polar Electro Oy, Professorintie 5, 90440 KEMPELE, Finland www.polar.com.

Polar Electro Oy is a ISO 9001:2015 certified company.

Regulatory information

This product is compliant with Directives 2014/53/EU, 2011/65/EU and 2015/863/EU. The relevant Declaration of Conformity and other regulatory information for each product are available at

www.polar.com/en/regulatory_information.

This crossed out wheeled bin marking shows that Polar products are electronic devices and are in the scope of Directive 2012/19/EU of the European Parliament and of the Council on waste electrical and electronic equipment (WEEE) and batteries/accumulators used in products are in compliance with Regulation (EU) 2023/1542 of the European Parliament and of the Council of 12 July 2023 concerning batteries and waste batteries. These products and batteries/accumulators inside Polar products should thus be disposed of separately in EU countries. Polar encourages you to minimize possible effects of waste on the environment and human health also outside the European Union by following local waste disposal regulations and, where possible, utilize separate collection of electronic devices for products, and battery and accumulator collection for batteries and accumulators.
